

Fiber optic cable flame retardant tape

Overview

This glass fiber tape withstands temperatures up to 900°C, provides flame retardant protection, and emits minimal smoke. FAA compliant, the adhesive on this tape self-extinguishes to prevent the spread of flames. It's often used in aircraft, ships, trains, and even submarines. To apply, cut to. It is suitable for the wrap tap and fire separated flame-retardant layer of the flame-retardant and fire-resistant cable. Serial high-power flame-retardant, oxygen and fire separated waterproof wrap tape is suggested used as the cabling wrap tap for the XLPE cable, and use the inorganic paper rope. Product Description: Using aluminum-borosilicate glass-fiber, the alkali metal compounds of them less than 0. Cable fiberglass tape can take 900 degree temperature. best. Unitube Fire-Survival cables offer up to 24 fibers in a compact cable construction. Suitable for areas where critical data transmission must continue when the building or structure in which it is installed is. SPEEDWRAP® FIBERTie™ Cut-To-Length Tapes (also known as 'double sided tape') are offered with special network color coding options. One of the primary physical characteristics of these tapes is their flexibility, which allows for tightly wrapping a cable without the tape cracking.
