

Fiber optic patch cord crimping equipment

AI Overview

Fiber optic patch cord crimping machines are specialized tools used to securely attach connectors to fiber optic cables, available in pneumatic and automatic models with adjustable pressure and interchangeable tooling.

Types of Crimping Equipment

1. **Pneumatic Fiber Optic Connector Crimpers** These machines use compressed air to crimp the fixing rings of fiber optic connectors, securing the cable jacket and Kevlar. They are suitable for connectors such as FC, ST, SC, MU, LC, and E2000. Pneumatic crimpers operate via solenoid valve control, offering simple, safe, and reliable operation in workshop environments . 2. **Automatic Fiber Patch Cord Crimping Machines** Automatic crimping tools, such as the CLX-Y1E model, provide high-speed, CNC-controlled crimping for large-scale production. They allow quick adjustment of crimping parameters, interchangeable tooling for different connector types, and stable quality output. These machines can handle up to 5,000 terminals per day and are designed to reduce labor intensity while maintaining consistent crimping quality .

Key Features

- **Adjustable Pressure:** Crimping pressure can be modified to suit different connector types and cable specifications, typically using air pressure between 0.6–0.9 MPa or mechanical adjustment for automatic machines .
- **Interchangeable Tooling:** Crimping dies and adapters can be replaced to accomm...
