

Fiber optic splice cable fixing clip

AI Overview

Fiber optic splice fixing clips are specialized holders used to secure and organize fiber optic splices in trays or enclosures, available in adhesive-backed, mechanical, and fire-resistant metal designs.

Types of Fiber Optic Splice Clips

1. Adhesive-Backed or Foam Holders These clips are designed to hold 6 or 12 fiber fusion splice sleeves or mechanical splices within splice trays. They are typically made of plastic or foam and can be mounted using adhesive, providing a secure and vibration-resistant solution for fiber management. Leading manufacturers include 3M, AMP, and Mooseline . 2. Mechanical Splice Clips Mechanical splice holders are molded clips that can hold multiple splices, often in configurations like 6-way, 8-way, or 16-position. They are usually made from flame-retardant nylon and can be mounted with screws or adhesive pads. These clips are ideal for organizing splices in patch panels or enclosures while maintaining proper bend radius . 3. Fire-Resistant Metal Clips For compliance with standards such as BS7671 and BS6701, fire-resistant metal clips are used to secure fiber optic cables in installations where plastic clips are prohibited. These clips are corrosion-resistant, quick to install, and designed to prevent hazards in case of fire. They are available in various sizes to accommodate different cable diameters . 4. Push Grip Clips Push Grip clips are single-component, taper-lock clips that are nearly invisible when installed. They are suitable for small-diameter fiber optic cables (0.9mm, 2.0mm, 3.0mm) and other small cables like CCTV or alarm wiring. These clips are designed to meet fire safety regulations and provide a secure, non-plastic solution
