

Fiji Telecom-Grade Router QSFP

AI Overview

QSFP modules provide high-speed, high-density connectivity for telecom-grade routers, supporting data rates from 40 Gbps to 400 Gbps, suitable for enterprise and service provider networks in Fiji.

Overview of QSFP Technology

The Quad Small Form-Factor Pluggable (QSFP) family is a hot-pluggable optical transceiver standard widely used in data centers, enterprise networks, and telecommunications infrastructure. QSFP modules combine multiple electrical channels into a compact form factor, enabling scalable bandwidth. Key generations include:

- QSFP+: 4 lanes $\times$ 10 Gbps = 40 Gbps aggregate bandwidth
 - QSFP28: 4 lanes $\times$ 25 Gbps = 100 Gbps aggregate bandwidth
 - QSFP56: 4 lanes $\times$ 50 Gbps = 200 Gbps aggregate bandwidth
 - QSFP-DD: 8 lanes $\times$ 50 Gbps = 400 Gbps aggregate bandwidth, backward compatible with QSFP28
- These modules support multiple protocols such as Ethernet, InfiniBand, Fibre Channel, and SONET/SDH, making them versatile for telecom-grade routers and switches.

Cisco QSFP56 Modules for Telecom Applications

Cisco's 200G QSFP56 modules are designed for high-performance networking, including AI/ML data centers, enterprise core networks, and service provider applications. Features include:...
