

Fire alarm linkage for computer room power distribution box

Overview

The power distribution cabinet (box) has a fire alarm linkage protection function. When a fire alarm occurs, it can be linked with the fire protection system to cut off the power supply in time, close the smoke and fire damper, and install a manual power cut-off device in the duty. Computer room commonly used power supply uninterruptible power supply (UPS) power supply, due to the use of pulse width frequency modulation technology, the maturity of high-efficiency power devices, microprocessor development and other factors, the uninterruptible power supply has become the main. The invention discloses fire-fighting linkage system and equipment applied to a communication machine room and used for safely switching off power supply on different auxiliary equipment in time under the condition that a communication machine room is subjected to fire invasion and damage. Help others learn more about this product by uploading a video! Amazon. com. AI anomaly detection spots minor power fluctuations early and helps prevent major failures. There are three factors that will affect the effectiveness of smoke detection. We should understand the main factors influencing the prolonged detection and increased. Particularly high requirements apply to fire protection in computer centres While, in the server rooms, it is primarily fire alarm technology and automatic extinguishing systems that are used, other building sections also require structural fire protection measures.
