

Fire pipe trough type cable tray

AI Overview

Fire pipe trough type cable trays are fully enclosed, fire-resistant cable management systems designed to protect cables from fire, mechanical damage, dust, moisture, and electromagnetic interference.

Overview

A trough type cable tray is a rigid, continuous structure with a solid or ventilated bottom and side rails, providing superior support and protection for electrical and data cables compared to ladder-type trays . The fire-resistant variant enhances safety by offering flame retardant properties, making it suitable for high-risk environments such as high-rise buildings, tunnels, subways, and industrial plants .

Key Features

- Fully Enclosed Design: Protects cables from dust, moisture, and external mechanical or electromagnetic interference .
- Fire Resistance: Maintains cable operation during fire events, reducing the risk of system failure .
- Anti-Corrosion Performance: Suitable for corrosive environments like chemical plants and electroplating facilities .
- Structural Stability: Can span long distances, supporting large industrial or commercial installations .
- Directional Shielding: Prevents interference for sensitive cables such as communication, computer, and thermocouple lines
