

Fireproof partitioning for distribution boxes

AI Overview

Fireproof partitions and enclosures for distribution boxes provide 30 to 180 minutes of fire resistance, using materials like rock wool, fire-rated glass, and heat-resistant metals, ensuring electrical safety and compliance with standards.

Types of Fireproof Partitions and Enclosures

1. Fire Protection Enclosures for Distribution Boards Manufacturers like ABB offer enclosures made from fireproof materials with fire resistance ratings conforming to DIN 4102 Part 2 (F30/F90) and classifications for interior (I30/I90) and exterior (E30/E90) fire protection . These enclosures include wall-mounted or floor-standing options, with ventilation systems that automatically close in the event of fire, maintaining functionality and preventing fire spread. Locking mechanisms and cable entry points are designed to preserve safety during operation.

2. Fire-Resistant Sandwich Panel Partitions Dagard provides partitions composed of sandwich panels with a rock wool core, which is non-combustible and has a melting point above 1000°C . These partitions are covered with galvanized steel sheets and can achieve fire resistance ratings of EI60, EI90, EI120, and EI180, depending on the assembly and thickness. They are easy to install, flexible for building modifications, and do not emit toxic smoke. 3. Fire-Rated Glass Partitions For applications requiring visibility or aesthetics, Pyroguard and DEKO FG Fire offer fire-rated glass partitions . Pyroguard partitions provide EI classification, preventing flame passage and limiting heat transfer, while DEKO FG Fire offers fully glazed, floor-to-ceiling partitions with f...
