

Fireproofing and Sealing of Cable Trays

AI Overview

Effective fireproofing of cable trays involves using intumescent coatings, fireproof pillows, caulks, and approved penetration seals to maintain cable functionality and prevent fire spread.

Fireproof Coatings and Tapes

Products like FLAMMOTECT-A fire protection coating and DG-CR 0.7 fire protection tape provide a protective shield around cables and trays, preventing flame propagation and maintaining cable operation during a fire. These solutions are highly resistant to environmental factors such as UV radiation, moisture, salt water, oil, and chemicals, making them suitable for both indoor and outdoor installations in high-risk areas like hospitals, airports, industrial plants, and power stations .

Fireproof Pillows for Penetrations

AF BAGS are intumescent and ablative fireproof pillows designed to seal cable tray penetrations in walls, floors, and sandwich panels. Certified under EN 1366-3, they can provide fire resistance up to EI 240. The pillows contain intumescent compounds, thermal insulators, and water-release products, allowing a compact sealing depth (e.g., 120 mm for cables up to 21 mm diameter) while being easily repositioned for maintenance .

Firestop Caulks and Putty

Products like 3M Fire Barrier Moldable Putty+ and IC 15WB Caulk are used to seal c...
