

Gabon Mobile Fiber Optic Interface Router

AI Overview

Gabon is rapidly expanding its fiber optic network to enhance mobile connectivity, with major operators like Airtel and Moov Africa deploying high-capacity fiber backbones that support mobile routers and broadband services.

Fiber Optic Network Expansion in Gabon

Gabon is actively developing its national fiber optic infrastructure to improve mobile and broadband connectivity. The government, in collaboration with operators such as Airtel Gabon and Moov Africa, is extending the national backbone by approximately 1,800 kilometers, building on the existing 1,628 km deployed under the Central African Backbone 4 (CAB4) project . This expansion aims to connect major urban centers like Libreville and Port-Gentil, as well as rural and suburban areas, improving coverage and service quality .

Mobile Operators and Fiber Integration

Mobile operators in Gabon are leveraging fiber optic networks to enhance mobile internet services. For example, Airtel Gabon invested USD 7.3 million to connect radio towers along a 208-kilometer fiber route between Libreville and Port-Gentil, improving high-speed mobile connectivity and creating local jobs . Moov Africa is also participating in joint ventures to pool infrastructure, reduce costs, and strengthen technical centers across the country
