

Gigabit optical module Linksys

AI Overview

Linksys-compatible Gigabit SFP modules provide reliable 1G fiber connectivity with options for single-mode and multimode fiber, supporting distances from hundreds of meters up to 80 km.

Single-Mode Fiber Modules (1000BASE-LH)

The Linksys LACGZX compatible SFP module supports 1000BASE-ZX Gigabit Ethernet over single-mode fiber (SMF) with a wavelength of 1550nm. It can achieve link distances of up to 70–80 km depending on fiber quality and link loss. These modules are hot-swappable and comply with SFP MSA, IEEE 802.3z, and SFF-8472 standards, ensuring compatibility with Linksys switches, routers, servers, and NICs. Third-party manufacturers like OPTCORE offer these modules at a significantly lower cost than OEM versions while maintaining tested reliability and performance .

Multimode Fiber Modules (1000BASE-SX)

The Linksys LACGSX compatible SFP module is designed for multimode fiber (MMF) networks, operating at 850nm. It supports distances of 550 meters on 50µm OM2 fiber or 220 meters on 62.5µm OM1 fiber. These modules also comply with SFP MSA, IEEE 802.3z, and SFF-8472 standards and include DOM/DDM functionality for real-time monitoring of fiber link parameters. They are compatible with a wide range of Linksys devices and provide stable optical links with low power consumption, making them ideal for 1G Ethernet and fiber channel applications .
