

HDMI panel fiber optic interface

AI Overview

Fiber optic HDMI cables, including panel-mount versions, transmit high-speed video and audio over long distances with minimal signal loss and immunity to electromagnetic interference.

Overview

Fiber optic HDMI cables, also known as Active Optical Cables (AOCs), use optical fibers to transmit video and audio signals as light pulses, rather than relying solely on copper conductors. Each end of the cable contains optical transceivers that convert electrical signals to optical signals (TX) and back to electrical signals (RX), making them highly efficient for long-distance transmission ().

Panel-Mount Fiber HDMI

Panel-mount fiber optic HDMI cables are designed for modular installation, allowing the cable to pass through conduits or be mounted directly on panels. They typically include:

- HDMI Female and Male adapters for flexible connection options
 - Support for HDMI 2.0 features, including 4K@60Hz, HDR, Ethernet, and 18Gbps data rates ()
 - Directional design, with one end labeled Source (TX) and the other Display (RX)
 - Compatibility with dual-link DVI adapters for additional display setups
- These cables are ideal for professional AV setups, conference rooms, or home theaters where long cable runs are required without signal degradation....
