

# Height of Aerial Optical Cable Lines Above Ground

## Overview

Recommended reference: ANSI/ICEA P-79-561-2020 Guide for Selecting Aerial Cable Messengers and Lashing Wires. Cables must be sufficiently high above the ground to clear all obstacles, including traffic that may pass underneath it. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Fiber in a duct solutions have a major aesthetic. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. These may be considerably different from those of the copper cable. SERVICE DROP STANDARDS COVER SHEET / TOC 60. CHECK UTILITY POLE OWNER REQUIREMENTS FOR MINIMUM. Establishing minimum height requirements prevents unintentional snagging by tall equipment or vehicles and reduces the risk of injury to individuals carrying long objects like ladders or fishing rods. The lowest minimum clearances for communication lines are designated for areas accessible only to. Workmanship in aerial cable networks can affect the performance and reliability of the network, of course, but also affects the aesthetics of the visible aerial cable plant.
