

High-voltage distribution box apepd

Overview

The APD PDB500 is designed for high voltage and high current applications. This PDB can sustain up to 125A continuous to each ESC leg. High voltage distribution box is the control part of EV power supply, which has the functions of power distribution, current measurement, short circuit protection, charge and discharge control, pre-charging, manual emergency stop and insulation testing port. Features: 1) quick dial connector and. Recognized by Automotive News with a PACE Award, Aptiv's industry-first solid state electrical centers replace traditional melting fuses with smart fusing and electromechanical relays with solid state switches, reducing package size, mass and power dissipation while supporting increased content. The APD PDB500 is designed for high voltage and high current applications. Find products and reference designs for your system.
