

Home Broadband Terminal Box

AI Overview

A Broadband Home Terminal Box, such as an ONT or FTTH terminal box, is the key device that connects your home to a fibre-optic broadband network and distributes internet to your router.

What It Is

A Broadband Home Terminal Box is a device installed in your home to serve as the connection point between the external fibre network and your internal network.

Common types include:

- **Optical Network Terminal (ONT):** Used in Full Fibre (FTTP) setups, this white box converts the incoming fibre-optic signal into a form your router can use. It typically has Ethernet ports for connecting your broadband router and may include a telephone port for digital voice services .
- **FTTH Terminal Box:** Also called a fiber termination or distribution box, it organizes and protects fibre cables, providing a secure connection point for optical accessories like splitters and connectors. These boxes can be wall-mounted indoors or installed outdoors .
- **MST Box (Multiport Service Terminal):** A hardened, weatherproof enclosure used in pre-terminated FTTH networks. It provides multiple output ports for drop cables while accepting a single feeder cable, reducing installation time and eliminating field splicing .
