

Hooks for tying fiber optic cables

AI Overview

Fiber optic cables can be secured using specialized hooks, brackets, and hook-and-loop fasteners that protect the cable while providing stable support.

Types of Hooks and Brackets

Pole and wall-mounted hooks are designed to support fiber optic cables on vertical structures. These are typically made from steel, aluminum, or durable plastic and are engineered to withstand environmental factors like wind, ice, and UV exposure. They prevent sagging, maintain proper cable clearance from power lines, and reduce the risk of tangling. ADSS drop cable brackets and poleline hooks allow cables to be wrapped neatly around them and are usually attached with bolts or clamps for a secure anchor point. Cable clamps and support brackets are used to maintain the minimum bending radius of fiber optic cables, preventing damage during installation. These can be part of a strain-relief kit and are available from manufacturers like Panduit and Richco.

Hook-and-Loop Fasteners

For indoor or patch cable management, hook-and-loop fasteners such as SPEEDWRAP® FIBERTie™ strips provide a gentle, reusable, and adjustable solution. These fasteners are made from VELCRO® Brand One-Wrap® materials, which are wide, flexible, and safe for fiber optic cables. They can be wrapped around cable bundles and secured onto themselves, allowing repeated use without leaving adhesive residue or damaging the fibers. They are available in multiple colors to help with cable identification
