

Hotel Electricity Meter Distribution Box

AI Overview

Hotel electricity meter distribution boxes are specialized panels designed to safely distribute power, integrate energy-saving systems, and support smart room automation in hotels.

Overview and Functionality

Hotel electricity meter distribution boxes, often referred to as Hotel Room DBs or Sub-Distribution Boards (SDBs), serve as the central point for distributing electrical power to individual rooms and hotel facilities. They are designed to balance guest comfort, energy efficiency, safety, and operational reliability. These boxes manage circuits for lighting, HVAC units, mini-bars, sockets, and other room-specific loads, while allowing certain service circuits to remain active even when rooms are unoccupied ().

Energy Management and Automation

Modern hotel distribution boxes integrate with key card systems or smart room automation. When a guest inserts a key card, the room enters an occupied mode, activating electrical loads. Removing the card automatically disconnects non-essential circuits, reducing energy consumption by up to 50% (). Some advanced systems also include smart metering, enabling hotels to monitor energy usage per room and optimize operational costs ().

Safety and Standards

Hotel distribution boxes are built to meet international safety standards such as IEC...
