

# Household Double-Layer Distribution Box Configuration Requirements

## AI Overview

A household double-layer distribution box typically includes a main switch, multiple single- and double-pole MCBs, RCCBs, and separate circuits for lighting, sockets, and high-power appliances, arranged in two layers for organized and safe power distribution.

### Box Structure and Installation

A double-layer distribution box is designed to house multiple circuit breakers and protective devices in two rows, allowing for organized separation of circuits. Common specifications include 16, 20, or 24 positions, where each position accommodates a circuit breaker or protective device. The box is usually installed on a dry, ventilated wall at a height of 1.5–1.8 meters from the floor for convenient adult operation and child safety. Materials can be metal (cold-rolled steel) for strength and heat dissipation or flame-retardant plastic (PC) for insulation.

### Main Switch

The main switch is typically a double-pole MCB or air circuit breaker rated for the household load, commonly 63A or 100A for a standard three-bedroom home. It controls the entire electrical system and provides protection against overload and short circuits. The main switch ensures that the entire system can be quickly disconnected during emergencies or maintenance ....
