

Household electrical distribution boxes can be moved

AI Overview

Yes, a household electrical distribution box can be moved, but it is a complex, highly regulated task that must be performed by a licensed electrician.

Key Considerations

Safety and Legal Requirements: Relocating a consumer unit or breaker panel is not a DIY project. It involves handling high-voltage connections and extending or rerouting circuits, which can be extremely dangerous if done incorrectly. All work must comply with local electrical codes, and the relocation is considered notifiable work requiring permits and inspection by building authorities . **Feasibility and Location:** The new location must meet strict code requirements, including adequate working space (minimum 36 inches in front, 30 inches width, and 6.5 feet headroom), accessibility, and avoidance of hazardous areas such as bathrooms or closets . The panel door must swing open at least 90 degrees without obstruction, and the area above and below the panel must remain clear of non-electrical equipment . **Technical Steps:** Before moving, all circuits must be tested for faults, and any wiring issues must be corrected. Existing cables may need to be extended, and if the original wires are too short, an accessible junction box must be installed to safely splice new wiring . The new panel must be properly mounted, circuits reconnected, and the system tested to ensure safety and functionality . **Costs and Planning:** Relocating a panel is a substantial home improvement project, often costing between \$2,500 and \$5,500 depending on complexity, required upgrades, and labor rates . Planning should include coordination with the utility company, assessment of the new location, and...
