

Household lighting distribution box circuit

AI Overview

A household lighting circuit is typically a radial circuit connected to a distribution board, protected by a circuit breaker or fuse, and controlled via switches to power individual lighting points safely.

Overview of a Household Lighting Circuit

In a typical home, lighting circuits are radial circuits, meaning each light or group of lights is connected in a single line from the distribution board to the lighting points (). The main components include:

- Supply from the distribution board: Electricity is fed from the main breaker through the distribution board to the lighting circuit ().
- Circuit protection: Each lighting circuit is protected by a Miniature Circuit Breaker (MCB) or fuse, which automatically disconnects power in case of overload or short circuit ().
- Switches: Single-pole or multi-way switches control the flow of electricity to the lights, allowing individual or multiple-point control ().
- Lighting points: The actual fixtures where electricity is converted into light ().

Wiring Types and Cables

Lighting circuits commonly use twin-core or three-core cables:...
