

How are EU U-shaped cable trays

Overview

U-channels are ideal installation channels when small quantities of cables need to be installed solidly, quickly and inexpensively without screws. They are made of halogen-free polyethylene-coated steel, in the same grid as the LANZ grid tracks, in a length of 195,5 cm. Clear cable routing – Organized and safe cable management, easy maintenance, helps prevent failures. Fast installation – Reduce installation costs with quick and efficient. These cable trays from LANZ are made of robust steel, with rounded shapes and with halogen-free polyethylene coating IEC 60754-1 / EN 50267-2-1 compliant (RAL 7035), or stainless steel. Its non-enclosed design permits easy cleaning and it is therefore exactly right for use in the food and pharmaceutical industries. Cables and lines can be fed in and out at any time and anywhere thanks to the mesh structure.
