

How long is a roll of outdoor optical cable

AI Overview

A standard roll of outdoor optical cable is typically 1000 meters, though some cables are sold in multiples of 100 meters.

Outdoor fiber optic cables are commonly supplied in 1000-meter rolls, which are wound on spools and packaged for secure transport and installation, making them suitable for long-distance runs and large-scale projects (Etayson) . Some manufacturers, such as FIBERHOME, offer cables in multiples of 100 meters, allowing flexibility for smaller installations or precise project requirements (MRO Expert) . The exact length can vary depending on the cable type, number of fibers, and intended application. For example, armored or multi-core cables may be sold in shorter lengths for easier handling, while standard single-mode outdoor cables are often supplied in full 1000-meter rolls. When planning installations, it is important to check the manufacturer's specifications to ensure the roll length meets project needs. In summary, while 1000 meters is the most common roll length, some outdoor optical cables are available in 100-meter increments to accommodate different installation scenarios .
