

How many meters long are cable trays in Turkmenistan

Overview

The standard tray length is 3m. 6m can be produced upon request. Cable tray supports and protects power cables, communication cables and wires, and helps to expand, make stable and restructure the cable network. Generally, we produce cable carrier systems called cable carrier, cable duct, cable bundle, cable ladder, cable canal. Specialized/Sigma Factory for Steel Products (SFSP) was first established in KSA in 1989 and has been expanding ever since through a variety of products and through its geographical presence. Production at the factory is observed using modern practices of manufacturing methods in the steel. In practice, cable tray dimensions are a system of interrelated measurements —width, depth, length, and material thickness—that directly affect cable fill compliance, heat dissipation, structural loading, and long-term expandability. One of the most recognized frameworks globally is the IEC standard for. Standard lengths of 3 to 6 meters Rung spacing of 150, 225, 300, and 450 millimeters Ladder cable tray is generally used in applications with intermediate to long support spans, 3meters to 6 meters.
