

How much does a 48-core 3km optical cable weigh

AI Overview

A 3 km 48-core optical fiber cable typically weighs between 600 kg and 1,200 kg, depending on its construction and armor type.

Estimating Cable Weight

The total weight of an optical fiber cable depends on its core count, type of armor, and outer sheath material. For a 48-core cable:

- Loose tube, gel-free, HDPE jacketed cables generally weigh around 0.2–0.3 kg per meter .
- Armored cables with corrugated steel tape (CST) or aluminum-clad steel (ACS) can weigh 0.3–0.4 kg per meter due to the added metal layers for mechanical protection .

Using these typical values:

- Lightweight loose tube cable: $3,000 \text{ m} \times 0.25 \text{ kg/m} \approx 750 \text{ kg}$
 - Heavier armored cable: $3,000 \text{ m} \times 0.35 \text{ kg/m} \approx 1,050 \text{ kg}$
- Thus, a 3 km 48-core optical cable will generally fall in the 600–1,200 kg range, depending on whether it is lightly armored or fully armored for outdoor or industrial applications.

Factors Affecting Weight

- **Armor Type:** Steel or aluminum armor increases weight significantly compared to unarmored or lightly armored cables.
- **Sheath Material:** HDPE, LSZH, or gel-free jackets have different densities, affecting total weight....
