

How much should a terminal box splicing cost

AI Overview

Terminal box splicing typically costs between \$50 and \$150 per splice, depending on labor, equipment, and site conditions.

Cost Breakdown

Labor: Skilled technicians are required for precise splicing, and labor is often the largest cost component. Hourly rates for certified fiber optic technicians range from \$50 to \$150 per hour, depending on experience and location. In confined spaces or difficult access areas, labor costs can increase due to safety requirements and additional crew members . **Splice Type:**

- Fusion splicing is the most common method for terminal boxes, offering low signal loss and high reliability. The per-splice cost typically ranges from \$50 to \$150, including OTDR testing to verify the joint .

- Mechanical splicing is less expensive upfront (\$5-\$12 per splice) but may result in higher signal loss and is usually used for temporary or emergency connections .

Equipment and Materials: Fusion splicers cost \$3,000-\$15,000, cleavers \$500-\$2,000, and OTDR testers \$5,000-\$20,000. Additional tools like strippers, protective sleeves, and cleaning supplies add a few hundred dollars per project .

Terminal boxes themselves, along with trays and closures, are typically not included in the per-splice labor cost. **Project Factors:**

- **Fiber count:** Higher fiber counts in a single terminal box can reduce the per-splice cost due to volume pricing....
