

How should the grounding strip of the distribution box be placed

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be $< 1 \Omega$. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical. Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1.8m). This helps to reduce the potential difference that exists between conductive parts and the earth. The basic rule achieves this through an equipment grounding jumper; four exceptions allow other methods. In addition, four installation rules warrant the continuity of the equipment.
