

How to Choose a Router for Your Fiber Optic Box

Overview

After analyzing nine models ranging from compact VPN-focused units to enterprise-grade edge routers, I've mapped the specs that matter most when choosing the best routers for fiber optic. Fiber optic internet demands a router that can handle symmetric throughput without dropping. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. Your gigabit fiber plan is being choked by a router that cannot keep up. The bottleneck in your home network isn't the fiber drop — it's the LAN ports and Wi-Fi generation on the box sitting in your closet.
