

How to Choose a Server Optical Module

Overview

How to Choose the Right Optical Transceiver Module?

When selecting an optical module, several factors must be considered to ensure that the module meets your specific network requirements. These include transmission distance, data rate, wavelength, connector type, and power. Figure 1 below is an internal schematic diagram of the Lenovo SR650 server, where no ports for direct optical module insertion are visible. Their primary role is to facilitate optoelectronic conversion, transforming electrical signals into optical signals, and vice versa. An optical SFP (Small Form-factor Pluggable) is a compact, hot-pluggable network interface module used to connect network devices (switches, routers, firewalls) to fiber optic or copper cables.
