

How to attach a fiber optic cold connector

AI Overview

Fiber optic cold connectors can be connected quickly and efficiently using mechanical splicing without heat, by preparing, aligning, securing, and testing the fiber ends.

Tools and Materials Needed

- Fiber optic fast (cold) connector
- Fiber stripper
- Fiber cleaver
- Cleaning materials (lint-free wipes, alcohol)
- Optional: optical power meter or visual fault locator for testing

Step-by-Step Connection Process

1. Prepare the Fiber

- Strip the protective coating from the fiber using a fiber stripper, exposing the bare glass fiber without nicking or damaging it .
- Clean the exposed fiber with a lint-free alcohol pad to remove dust, grease, or other contaminants .
- 2. Cleave the Fiber
 - Use a fiber cleaver to cut the fiber cleanly at a 90° angle, ensuring a smooth end face for optimal light transmission .
 - Inspect the cleaved end under a microscope if available to check for cracks or irregularities.
- 3. Insert the Fiber into the Connector
 - Align the fiber with the mechanical splice inside the cold connector. Most connectors have a precision-molded V-groove to hold the fiber in place
