

How to configure the switch in the indoor electrical distribution box

AI Overview

Switches in a distribution box are configured by connecting the main supply to the main switch, distributing power to branch switches, and ensuring proper grounding and labeling for safety.

Understanding the Distribution Box

An indoor electrical distribution box, or distribution board, is where the main power supply is divided among multiple circuits. It typically contains:

- Main Switch (Double Pole MCB): Controls the overall power supply to the box. Usually rated at 63A for domestic installations in a 230V system .
- Branch Circuit Breakers (Single or Double Pole MCBs): Control individual circuits or special loads .
- RCCB (Residual Current Circuit Breaker): Provides protection against leakage currents and is essential for safety .
- Busbars and Wiring: Conduct electricity to each switch and circuit .

Step-by-Step Switch Configuration

- Turn Off Power: Switch off the main breaker to de-energize the circuit. Verify with a voltage tester or multimeter that no current is present .
- Connect the Main Supply:
- Connect the incoming phase (live) and neutral wires to the main switch (double-pole MCB)....
