

How to connect Huawei fiber optic cable to the router

AI Overview

To connect a Huawei fiber optic cable to a router, you typically use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then link it to your router's WAN port.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, converts fiber signals to electrical signals compatible with your router .
- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors .
- Router: Ensure it supports fiber input via WAN or SFP ports .
- Ethernet cable: Cat6a or higher recommended for optimal speeds .

Step 2: Connect Fiber to the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home .
- Plug one end of the fiber optic cable into the wall outlet and the other into the ONT's designated fiber port .
- Power on the ONT and wait 2-5 minutes for the status lights to stabilize .

Step 3: Connect ONT to Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to your router's WAN port .
- Power on the router and wait for the indicator lights to confirm a successful connection
