

How to connect a fiber optic patch cord to a pigtail

Overview

In this detailed video, we'll walk you through the fiber optic pigtail splicing process — from preparation to final testing. Field-terminating connectors is a meticulous, high-pressure process where even a tiny mistake can force you to cut the fiber and start all over again. This is exactly why most professional installers have moved away from field-termination and toward splicing. A Fiber Patch cord connects two devices. You plug it into a switch, router, or patch panel. Typically, these fibers come in various configurations, including single-mode and multi-mode versions, and can be terminated with. The fiber optic pigtail is a short terminated optical fiber with a connector on one end, used to facilitate easy connections between fiber optic cables and various devices. The success of a network in fiber optic cable installation heavily.
