

How to connect fiber optic cable to a router in your home

AI Overview

To connect a fiber optic cable to your home router, you must first use an Optical Network Terminal (ONT) to convert the fiber signal into Ethernet, then link it to your router's WAN port.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts the fiber optic signal into a standard electrical signal your router can use .
- Fiber optic cable: Usually a thin yellow cable with SC/APC or SC/UPC connectors .
- Ethernet cable: To connect the ONT to your router .
- Router: Ensure it supports fiber input via a WAN port or SFP slot .

Step 2: Install the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT's optical port. Handle the connector carefully, avoiding dirt or damage, and remove protective caps before insertion .
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes .

Step 3: Connect the ONT to Your Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN/Internet port
