

How to install a fiber optic quick connector closure

AI Overview

Installing a fiber optic quick connector closure involves preparing the fiber, stripping and cleaving it, and securing it into the pre-embedded connector using either cold or hot splicing methods.

Tools and Materials Needed

- Fiber optic quick connector (pre-embedded type)
- Fiber cleaver and cutter
- Optical fiber stripper
- Dust-free wipes and isopropyl alcohol
- Crimping or assembly tool (if required)
- Safety glasses and black work mat
- Optional: fusion splicer for hot splicing

Step-by-Step Installation (Cold Splicing Method)

- Prepare the Connector and Cable: Remove the end cover of the quick connector and pass the optical cable through the connector housing. Ensure the pre-embedded fiber inside the connector is intact; if broken, replace the connector .
- Strip the Fiber: Use an optical fiber stripper to remove the outer sheath, typically 4-5 cm, exposing the bare fiber. Leave the screw cap on the cable for later assembly .
- Clean the Fiber: Wipe the exposed fiber with a dust-free cloth and isopropyl alcohol to remove any debris
