

How to install cable tray tees with the tee facing upwards

AI Overview

To install a cable tray tee with the tee facing upwards, ensure proper alignment, support, and secure connections while maintaining cable continuity and load capacity.

Step 1: Plan the Layout

Before installation, mark the route of the main tray and the tee branch. Consider clearance, load capacity, and cable separation requirements. Ensure the upward-facing tee will not interfere with existing trays, equipment, or ceiling structures .

Step 2: Select the Tee and Supports

Choose a tee fitting compatible with your tray type (ladder, perforated, or solid-bottom). For upward-facing tees, gussets or reinforced fittings may be required to maintain structural integrity under cable load . Determine the support method: trapeze, swing, or vertical hangers, ensuring the tee is level and stable .

Step 3: Install Supports

- Install vertical hangers or trapeze supports at the tee location.
- Thread hex nuts and slide square washers onto the all-thread rods.
- Position the cross member so it aligns with the bottom of the tee, allowing for horizontal adjustment and attachment of tray clips
