

# How to match cable tray screws

## AI Overview

Select screws and bolts based on the cable tray type, load, and fittings, using manufacturer-recommended fasteners like truss-head bolts, combination nuts, or clamps for secure installation.

### Identify the Cable Tray Type and Fittings

Cable trays come in perforated and unperforated versions and vary in width (100–600 mm) and side height (35–110 mm) depending on the system and load requirements . Fittings include bends, tees, reducers, cross-overs, and covers. Each fitting may require specific fasteners: some can use double clamps (DOP A2) or truss-head bolts (FRS) with combination nuts, while certain vertical bends or low-height fittings must be screwed directly .

### Choose the Correct Fasteners

- Truss-head bolts (FRS) and combination nuts: Commonly used for joining tray sections and securing fittings. They provide strong, reliable connections and allow disassembly if needed .
- Double clamps (DOP A2): Used to attach fittings to tray rails, especially for bends and junctions .
- Splice plates and bolts: Flat metal plates with pre-drilled holes are used to join straight tray sections. Bolts and nuts secure the plates, ensuring stability and load-bearing capacity .
- Quick-connect systems: Some manufacturers offer snap, slide, or twist fittings that require minimal tools and speed up installation, but they are usually brand-specific...
