

How to route the wires in the distribution box

AI Overview

Proper wire routing in a distribution box ensures safety, organization, and compliance with electrical standards.

Preparation and Safety

Before starting, turn off the main power to prevent electrical shock. Ensure the distribution box is securely mounted at an accessible height, typically around 1.5 meters, in a dry, ventilated area . Gather all necessary materials, including circuit breakers, wires of appropriate gauge, wiring ties, and tools for insulation and connection .

Wire Routing Principles

- **Circuit Breaker Arrangement:** Place circuit breakers from left to right, reserving space for future expansion on the right side of the box .
- **Wire Color Coding:** Use standard colors for easy identification: neutral wires in blue, phase wires in yellow (A), green (B), and red (C) . Ground wires are typically green/yellow striped.
- **Wire Specification:** Select wire gauge according to the load. For example, lighting and socket circuits often use 2.5mm², while air conditioning circuits may require 2.5mm² or 4.0mm² .
