

How to run fiber optic cable on a router

AI Overview

To use a fiber optic cable with a router, you must connect the fiber line to an Optical Network Terminal (ONT) and then link the ONT to your router via Ethernet.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Converts the fiber's light signals into electrical signals your router can use, usually provided by your ISP .
- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors .
- Router: Ensure it supports fiber input or has a WAN port for Ethernet connection .
- Ethernet cable (Cat6a or higher): Connects the ONT to the router to maintain high-speed performance .

Step 2: Install the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes .

Step 3: Connect the ONT to Your Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN/Internet port .
- Power on the router and wait for the indicator lights to confirm a successful connection .
