

How to use a router in a fiber optic home

AI Overview

To use a router for fiber optic internet, connect the ISP-provided Optical Network Terminal (ONT) to a compatible router via Ethernet, then configure the router settings for optimal performance.

Step 1: Understand the Hardware

Fiber internet requires an Optical Network Terminal (ONT), which converts the fiber optic light signals into electrical signals your router can use . You cannot plug a fiber cable directly into a standard router. Ensure your router has a Gigabit Ethernet WAN port and supports high-speed connections, ideally Wi-Fi 6 or higher for full fiber performance .

Step 2: Connect the Fiber Line

- Locate the fiber optic wall outlet where the ISP's fiber enters your home .
- Connect the fiber cable to the ONT's optical input port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network .

Step 3: Connect the Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port .
- Place the router in a well-ventilated area near a power outlet, ideally protected by a surge suppressor .
- Power on the router and wait for the indicator lights to confirm connectivity....
