

India Joins Transparent Optical Cable Single Mode

AI Overview

India has launched its first Hollow Core Fibre single-mode optical cable, marking a major step in high-speed, low-latency optical connectivity.

Technological Breakthrough

STL (Sterlite Technologies Limited) has developed and launched India's first Hollow Core Fibre (HCF) cable, a type of single-mode optical fibre that guides light through an air-filled core rather than solid glass. This design allows signals to travel approximately 46% faster, significantly reducing latency and signal loss, which is critical for data centres, hyperscalers, and high-frequency transmission networks. STL's HCF cable also features a hybrid architecture combining:

- Hollow Core Fibre for ultra-low latency and high-power delivery
 - G.654.E Fibre optimized for ultra-low loss in long-haul transmissions
 - G.657.A1 NOVA Fibre for versatile network coverage
- This innovation positions India as a global player in advanced optical fibre technology, supporting AI-ready digital infrastructure and high-speed broadband networks.

Expansion of Optical Fibre Networks

India has made substantial progress in rolling out optical fibre infrastructure. As of March 2025, the country has laid 698,010 route kilometres of optical fibre cables, with Tamil Nadu, Kerala, Andhra Pradesh, and Telangana leading in coverage. This...
