

Intelligent Communication Tower Installation Solution

Overview

These solutions integrate advanced technology into new and existing tower sites. This transformation is critical. It supports the demands of 5G, the Internet of Things (IoT), and edge. Inttow Towers have been designed to integrate electric charging units, taking into account the needs of today's rapidly developing electric vehicle technology. Inttow provides captivating advertisement volume with different applications such as high-quality printed billboards, LED display for 2D and 3D. The rise of 5G, the Internet of Things (IoT), and complex network management has created a need for towers that can monitor themselves. They move towers from passive structures to active, intelligent network nodes. It supports the demands of 5G. We are developing and producing infrastructures that add elegance with future modern communication systems. We will present the beauty of art for the new era in communication by bringing it together with security and energy resources without harming the planet we live in.
