

Intelligent Manufacturing Workshop for Optical Cables

Overview

This solution deeply integrates the data of the entire cable production process, covering core procedures such as wire drawing, stranding, extrusion, cabling, armoring, and inspection and testing, as well as information on all elements including production equipment (wire. This solution deeply integrates the data of the entire cable production process, covering core procedures such as wire drawing, stranding, extrusion, cabling, armoring, and inspection and testing, as well as information on all elements including production equipment (wire. Hightopo empowers optical cable workshops with full-scenario digital twin mapping, real-time configuration monitoring, and intuitive data visualization. Based on the self-developed HT for Web engine, it builds high-fidelity 3D workshop models to synchronize equipment status, productio Hightopo. Jera possesses the technology of fiber optic cable production and manufacturing fiber optic cables for overhead and underground cable infrastructure. We have several production lines to produce fiber optical cable such as GJXH, GJXFH, GJYXCH,GJYXFCH etc. The company officially put a new production workshop into operation at its Guangming facility, expanding its existing manufacturing capacity through a more efficient and. The Hightopo digital twin cable factory solution achieves digital, visual and intelligent control of the entire life cycle of cable production by building a virtual digital model that is 1:1 mapped to the physical factory. This solution deeply integrates the data of the entire cable production.
