

Is the grounding of the distribution box for lightning protection

Overview

Proper grounding of the system can protect against lightning strikes, electrical failures, and transient overvoltages. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical. System grounding is the connection to the ground – solidly or through impedance – of current-carrying conductors – e., the neutral point of a wye-connected transformer and the phase on a corner-grounded delta connection. Paragraph (d) of this section also applies to protective grounding of other equipment as required elsewhere in this Subpart. According to the principle of graded lightning protection, and based on the likelihood of a building being struck by lightning, it is necessary to deploy surge protector against lightning in stages to. NEC (National Electrical Code) Article 250 covers grounding and bonding for electrical installations to protect from electrical shock and ensure correct operation of the electrical system.
