

Is there a problem with the lights on the fiber optic router

AI Overview

Router lights indicate power, connectivity, and data activity; unusual colors or persistent blinking can signal a problem.

What the Lights Mean

- **Power Light:** A solid green or blue light means the router is powered on and functioning normally. Blinking may indicate startup or a power issue, and if it never stabilizes, there could be a hardware problem .
- **Internet/WAN Light:** Solid green or blue shows a successful connection to your ISP. Blinking indicates data transfer or the router attempting to establish a connection. Red or amber lights suggest no internet connection or a fault with the ISP link .
- **Wi-Fi Light:** Solid green or blue means the wireless network is active. Blinking indicates data transmission. Amber or red may indicate interference, too many connected devices, or weak signal .
- **ONT/Link Light:** On fiber setups, a green light shows the ONT is connected to the ISP network. Amber or yellow indicates the device is trying to establish a connection, and red signals a failed connection .
- **Data Light:** Green indicates successful data transmission, yellow or amber shows slow or intermittent data, and red indicates a severe transmission problem .
- **Alarm/Error Light:** Red indicates a detected fault or error; off means no errors .

Troubleshooting Tips

- **Check Power and Connections:** Ensure the router and ONT are plugged in securely...
