

Israel receives fiber optic cable

AI Overview

Israel is rapidly expanding fiber optic infrastructure, with over 1.6 million households already having access, while international submarine cable projects face delays.

Domestic Fiber Deployment

Israel has been actively deploying fiber optic infrastructure across the country, aiming for near-universal coverage. As of June 2022, over 1.6 million households have access to fiber, with approximately 670,000 households subscribing to the service . The government's incentive fund program has accelerated deployment, targeting 100% coverage by the end of 2024, including peripheral areas and ultra-Orthodox, Jewish, and Arab communities . Deployment rates have reached up to 100,000 households per month, making Israel one of the fastest countries in the world for fiber rollout . Key cities and regions already connected include Jerusalem, Be'er Sheva, Hadera, Akko, and surrounding villages .

Market and Imports

Israel's fiber optic cable market relies heavily on imports, primarily from China, the United States, and Poland, while exports are directed to countries like the United States, Colombia, and Belgium . The market is influenced by global supply and pricing trends, with Israel's average export price for optical fiber cables in 2024 being higher than its import price . This import reliance ensures that domestic deployment can continue despite local production limitations.
