

Looking for fiberglass cable trays with complete specifications

AI Overview

Fiberglass cable trays are corrosion-resistant, non-conductive support systems ideal for harsh, industrial, and marine environments, available in ladder, trough, and solid-bottom designs with various resin types and load capacities.

Overview of Fiberglass Cable Trays

Fiberglass cable trays, also known as FRP (Fiber Reinforced Plastic) cable trays, are structural systems used to route and protect electrical and instrumentation cables. They are manufactured from fiber-reinforced polyester or vinyl ester resins, providing high corrosion resistance, long service life, and low maintenance compared with traditional steel trays. These trays are non-conductive, non-magnetic, and lightweight, making them suitable for environments where electrical insulation and reduced weight are critical.

Types of Fiberglass Cable Trays

- **Ladder Type:** Features two side rails connected by transverse rungs. The open design allows excellent ventilation and heat dissipation, making it ideal for power cables and large-diameter control cables. Commonly used in power distribution, substations, and industrial plants.
- **Trough or Channel Type:** Has a bottom plate with side rails, offering more protection while still allowing some ventilation. Suitable for control, communication, and instrumentation cables that require shielding from dust or falling objects.
- **Solid Bottom Type:** Provides full protection for sensitive cables, often used in cont...
