

Machine for on-site fabrication of cable tray bends

AI Overview

Cable tray bends can be fabricated on-site using portable or CNC-controlled cable tray bending machines, which allow precise, efficient, and customizable bends for various tray types.

Overview of On-Site Cable Tray Bending

For on-site fabrication, dedicated cable tray bending machines are designed to bend ladder, solid, ventilated, or wire mesh trays directly at the installation location. These machines eliminate the need to pre-fabricate all bends in a factory, reducing transport costs and enabling adjustments to field conditions. They are particularly useful for complex layouts, tight spaces, or custom angles.

Types of Machines

- Portable Manual or Hydraulic Benders
- Compact and transportable for field use.
- Operate via manual or hydraulic leverage to bend metal trays.
- Suitable for small-scale projects or occasional bends.
- Can handle standard tray widths and thicknesses, typically up to 2-3 mm steel or aluminum.
- CNC Cable Tray Bending Machines
- Computer-controlled for precise, repeatable bends.
- Capable of multiple bends per tray section with accurate back gauge positioning....
