

Mauritanian Stainless Steel Distribution Box Specifications

AI Overview

Stainless steel distribution boxes in Mauritania are available in high-grade 304 and 316 stainless steel, offering IP-rated protection, corrosion resistance, and suitability for harsh environments.

Material and Construction

Mauritanian distribution boxes are typically constructed from high-quality stainless steel, including grades 304 and 316, which provide excellent corrosion resistance and durability in both indoor and outdoor environments. Some models, like BARTEC boxes, use 1.4301 (V2 A) or 1.4404 (V4 A) stainless steel, suitable for extreme environmental conditions. The enclosures are designed to withstand heavy loads and provide long-term reliability.

Protection and Environmental Ratings

These boxes often feature IP ratings ranging from IP23D to IP69K, ensuring protection against dust, water, and other environmental hazards. They are suitable for installation in areas with ambient temperatures from -25°C to 40°C , relative humidity up to 90%, wind speeds up to 34 m/s, and ice thickness up to 20 mm. Pollution levels II and III are supported, making them appropriate for urban, industrial, and infrastructure applications.
