

Methods for Termination and Splicing of Power Optical Cables

Overview

We terminate fiber optic cable two ways - with connectors that can mate two fibers to create a temporary joint and/or connect the fiber to a piece of network gear or with splices which create a permanent joint between the two fibers. Only as good as the people who create them. Teams of 3M scientists, chemists, engineers, electricians and technicians work together with manufacturing, quality control, sales and distribution to deliver high quality products – products that require products include “human engineering.” Not only are our. Further, splices and terminations, a vital part of any cable system, become more susceptible to failure at higher voltages. Whether the splice or termination is accomplished using hand-applied tapes, a filled or molded device, heat-shrinkable tubing, or a prefabricated device, care should be. From our earliest endeavors with tapes, adhesives and abrasive minerals over a half-century ago, 3M has grown to worldwide recognition in vital technologies. Fill in the open route corresponding to each core of the optical fiber into the data label on the ODF frame for easy maintenance and search. This technique is essential in various fields, including telecommunications, electrical engineering, and construction.
