

Methods for sealing wall penetration holes of cable trays and trunking

Overview

About this method statement: This method statement details how to firestop cable tray penetrations through fire-rated walls using tested intumescent pillows or coated board systems. It includes tray support separation, sealing, hold-point inspections, QA/QC, and HSE controls. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed. Cable entry holes are necessary to feed important cables and wiring through a wall, but these holes must be sealed properly for safety reasons. How do you. Service penetration seals are passive fire protection systems designed to maintain the fire resistance of building element or section - wall or floor - where services such as cables, cable trays, pipes or ventilation ducts pass through them. Unlike a downloadable. SLIPSIL Sealing Plugs are an ideal solution for the fire-safe, gas and / or watertight sealing of penetrations carrying single or multiple pipes.
