

Nauru High Temperature Measurement Optical Cable Specifications

AI Overview

Nauru High Temperature Measurement Optical Cables are specialized fiber optic cables designed for precise temperature monitoring in extreme industrial and underwater environments.

Overview

These optical cables are engineered to measure temperature along their entire length using the fiber itself as a sensing element, a technology known as Distributed Temperature Sensing (DTS). They are ideal for applications such as tunnel monitoring, smart grids, industrial plants, offshore energy, and underwater telecommunications . The cables provide high spatial resolution, often sub-millimeter, and can deliver continuous temperature data over long distances, sometimes exceeding 1,200 meters .

Construction and Materials

High-temperature optical cables are built to withstand extreme thermal, mechanical, and chemical conditions. Common materials include:

- Insulation and jackets: Silicone, ETFE, FEP, PFA, PTFE, Mica, Fiberglass, Polyurethane, or Neoprene .
- Conductors: Stranded annealed tinned copper or bare copper, often with shielding layers like aluminum Mylar tape and copper braid for interference resistance
